

## **Case Study**

# Manchester, England Based Banking Client -**Gets Web-based Refinery System**

#### **Client Overview:**

England Based Banking clients wanted to improve their customer experience by developing web-based applications. Banks mainly focus on commercial, Wealth, Personal and Global Banking groups. It offers a wide range of financial services like debit and credit cards, loans, Online, mobile, and tablet banking, Mobile check deposit etc.

#### **Problem Statement:**

They wanted a refinery system which could help them to refine the data and can manage their assets based on the requesters.

#### **Solution:**

Our Full Stack experts leveraged its past experience and analyzed the requirements, which led to providing the well-defined architecture to meet customer expectations and build a user interface as a Web-based application with React.js, which is integrated with Backend APIs to provide a cost-effective solution to drive their journey towards refinery system.

### **Client Benefits:**

- Refining of data with user interface
- Manage all their assets directly through a user interface
- ease of use to handle policies and accesses for requesters.
