

Case Study

Virginia, USA Based Automobile Client - Gets **Solution for Managing Sales**

Client Overview:

US Based Automobile company designs and manufactures vehicles, motorcycles, and engines as well, offering a wide range of services which includes financing, leasing and fleet management. It was a growing automaker by sales and maintained its market share.

Problem Statement:

The client wanted to avoid administrative costs and minimize the delays in document processing. A major concern is to develop a cost-effective solution and management system which can manage their sales, services or reselling etc.

Solution:

Our Full Stack experts used their IT experience and followed the agile methodology to develop a clientbased application which helps to store documents, including videos, images, files, emails etc.

Provided the capabilities of search and filtration options to filter the data based on the keyword and file names. By enabling the access level controls, they will even be able to share the files with other sources.

Client Benefits:

- Reduced operational cost
- Modular design, Which can be customized for future requirements
- Consistency and fast processing
